

OPTIMAL-BNT (rebin 40) vs standard non-BNT — baryon tension vs scale cut

monopole-subtracted PS, $\ell \geq 37$, step-40 | 3-param Q_DM, mean $\pm$ std / 3 runs | BNT at its optimal binning (no-cut % = how close to the lossless BNT=non-BNT identity)

--- Threshold (0.3) ■ non-BNT — cut all bins ● BNT — cut bin-1 only (bins 2-4 full)
